

FD9 Alfalfa | High Yielding Hay | Adapted to Warm Climates

Dynamo Verde

Dynamo Verde is the best alfalfa product for producing high quality hay under a wide range of soil types and high temperature growing conditions. Resistant to major alfalfa pests and diseases.

Agronomic Traits

- Seedling Vigor: Excellent
- Persistence: Very Good
- Yield Potential: Excellent
- Forage Quality Potential: Very Good
- Cutting Recovery: Very Fast
- Growth Habit: Upright
- Stem Size: Medium
- Fall Dormancy: 9

Key Advantages

- Adapted to warm desert climates where winter temperatures do not drop below freezing for multiple days—such as California, Arizona, New Mexico, and Northern Mexico
- Produced from superior genetics in California and Australia where the majority of the world's non-dormant alfalfa seed is produced
- Enhanced with an exclusive mineral coating that includes fungicide and Rhizobium inoculant for better planting results
- Higher forage quality than CUF 101
- Very good leaf to stem ratio with excellent leaf retention and dark green color
- Disease and pest resistant
- Moderately tolerant to saline soils and irrigation water
- Ideal for producing hay or dairy quality forage
